

while after a decade, business administration was the first choice of students. And, now people are mad after computer sciences. Most of the students opt their subjects regardless of their capabilities and interests. There should be a separate department for the guidance and counselling of students to help them in choosing the careers according to their capabilities. Attitude tests should be stated as in other countries.

Research work is not admired in our system That's why, there are less job opportunities in social sciences. Students avoid to opt these subjects. Research work should be given emphasis. It can bring a revolutionary change in the system.

Scientific knowledge and research work is a major tool in the way of development. In the European countries, people interested in research work are awarded stipends and extra-facilities. Students - teacher relationship is an important factor — contributing a lot in a good educational system. Behaviour of teachers is not friendly in our institutions. They are less competent and avoid to guide the students.

In professional colleges, syllabus is satisfactory but examination system is not sufficient. Most of the students in medical colleges and engineering universities, are not satisfied with the examination system. When one of the doctors was asked about their examination system, it was told by Dr. Zeeshan who has done his MBBS from KE re-

utilized properly. Despite all the drawbacks of our education system, it is producing competent and intelligent graduates who are proving their worth even abroad. But these students are not given reward of their hard work. Most of the students deserving scholarships, are deprived of it and non-deserving are sent abroad on scholarships. On the other hand, many people reluctant to stay in the country, are not given jobs. Their unemployment induces them to leave the country. It results in the brain drain, and many of the intellectuals produced by our system, are not utilized properly.
